

VOLUME 6

Make It Coherent, Then Make It Grow

CSS architecture, mobile apps, browser persistence, refactoring, deployment, and the complete repository atlas

A beginner-to-engineer rebuild guide grounded in the real repository

PATTERN > PRACTICE > REPETITION > REFINEMENT > HABIT

Learning Map

Use this volume as a build session, not passive reading. Type the examples, pause at checkpoints, and keep the architecture questions beside your editor.

Chapter	You will learn
1. CSS as a system	Read global layout, feature styles, cascade, and responsive rules.
2. Mobile shell	Build stack navigation, app frames, widgets, and mini-apps.
3. Browser APIs	Use localStorage, events, geolocation, and fetch safely.
4. Quality and deployment	Verify, optimize, document, and ship.
5. Future architecture	Plan growth without premature complexity.
Appendix A	Analyze all 180 repository files and assets.

Chapter 1: CSS as a System

Chapter outcome: You will understand how Macfolio CSS is laid out and how to keep a growing stylesheet predictable.

WHAT CSS is a rule system that matches elements and resolves competing declarations through origin, specificity, and source order.

WHY A coherent system prevents each component from inventing spacing, colors, and layout behavior independently.

WHEN Define global primitives once; keep feature-specific selectors beside the feature when they form a substantial visual domain.

WHERE Macfolio has `src/index.css` for desktop/global styling and `features/mobile-shell/styles.css` for the mobile domain.

HOW Organize from foundations to shells to components to states to responsive overrides, using stable class prefixes.

CSS layer	Examples	Reason
Reset/foundation	box-sizing, body/main defaults	Create predictable browser behavior.
Shell geometry	nav, dock, window layer, mobile root	Define the major coordinate systems.
Components	dock icon, Finder grid, editor panes	Style reusable visual units.
States	active, minimized, full, error	Make interaction state visible.
Responsive	media queries and stable dimensions	Adapt without accidental layout shifts.
Motion	transitions and keyframes	Support meaning; respect reduced motion later.

Global foundations and early desktop selectors

```
@import
url("https://fonts.googleapis.com/css2?family=Georama:ital,wght@0,100..900;1,100..900&family=Roboto+Mono:ital,wght@0,100..700;1,100..700&display=swap");

/* ===== FONT ===== */
@import url('https://fonts.googleapis.com/css2?family=Fira+Code:wght@300;400;500&display=swap');

@import "tailwindcss";

html,
body {
```

```

width: 100dvw;
overflow: hidden;
height: 100dvh;
background-image: url("/images/wallpaper.png");
background-size: cover;
background-repeat: no-repeat;
background-position: center;
}

*,
*::before,
*::after {
  cursor: default !important;
}

@theme {
  --font-georama: "Georama", sans-serif;
  --font-roboto: "Roboto Mono", monospace;
  --breakpoint-3xl: 1920px;
}

@utility flex-center {
  @apply flex items-center justify-center;
}

@utility col-center {
  @apply flex flex-col items-center justify-center;
}

@utility abs-center {
  @apply absolute top-1/2 left-1/2 -translate-x-1/2 -translate-y-1/2;
}

@layer base {
  main {
    @apply w-dvw h-dvh overflow-hidden;
  }

  nav {
    @apply flex justify-between items-center bg-white/45 backdrop-blur-3xl py-1.5 px-4 select-none border-b border-white/20;

    div {
      @apply flex items-center max-sm:w-full max-sm:justify-center gap-3;

      &:last-child {

```

Flexbox handles one-dimensional alignment such as nav items or toolbars. Grid handles two-dimensional collections such as icons and cards. Fixed positioning creates the desktop coordinate space for windows; transforms move dragged windows efficiently. Overflow rules decide which layer may scroll and which must clip.

Current debt: Both stylesheets are large. That is not automatically wrong, but feature growth will make ownership harder. A gradual next step is to move desktop feature styles beside Finder, code preview, and desktop shell while preserving naming and visual tokens.

Chapter 2: The Mobile Shell

Chapter outcome: You will recreate mobile stack navigation and understand why it stays separate from desktop windows.

Mobile navigation coordinator

```
import { useState } from "react";
import { AnimatePresence, motion as Motion } from "framer-motion";

import { getMobileApp } from "../data/apps";
import { AppFrame, HomeScreen } from "../shell";
import {
  AboutApp,
  ArticlesApp,
  CodeApp,
  ContactApp,
  GalleryApp,
  ProjectsApp,
  ResumeApp,
  SkillsApp,
  TodoApp,
  WeatherApp,
} from "../apps";
import "../styles.css";

const APP_COMPONENTS = {
  about: AboutApp,
  projects: ProjectsApp,
  skills: SkillsApp,
  articles: ArticlesApp,
  github: CodeApp,
  code: CodeApp,
  weather: WeatherApp,
  todo: TodoApp,
  resume: ResumeApp,
  gallery: GalleryApp,
  contact: ContactApp,
};

const MobileApp = () => {
  const [stack, setStack] = useState([]);

  const activeRoute = stack[stack.length - 1] || null;
  const activeApp = activeRoute ? getMobileApp(activeRoute.id) : null;
  const ActiveComponent = activeApp ? APP_COMPONENTS[activeApp.id] : null;

  const openApp = (app) => {
    if (!app) return;
    const resolvedApp = getMobileApp(app.appId || app.id);
    if (!resolvedApp) return;

    setStack((current) => [
      ...current,
      {
        id: resolvedApp.id,
        title: resolvedApp.title || resolvedApp.name,
        key: `${resolvedApp.id}-${Date.now()}`,
      },
    ]);
  };
}
```

```

};

const goBack = () => {
  setStack((current) => current.slice(0, -1));
};

return (
  <main className="mobile-root" aria-label="Aditya portfolio mobile experience">
    <HomeScreen onOpenApp={openApp} />

    <AnimatePresence>
      {activeRoute && activeApp && ActiveComponent && (
        <Motion.div
          key={activeRoute.key}
          className="mobile-screen-layer"
          initial={{ x: "100%", opacity: 0.85, scale: 0.98 }}
          animate={{ x: 0, opacity: 1, scale: 1 }}
          exit={{ x: "100%", opacity: 0.4, scale: 0.98 }}
          transition={{ type: "spring", stiffness: 320, damping: 34 }}
        >
          <AppFrame title={activeRoute.title} icon={activeApp.icon} onBack={goBack}>
            <ActiveComponent mode={activeApp.id === "github" ? "github" : "code"}
              openApp={openApp} />
          </AppFrame>
        </Motion.div>
      )}
    </AnimatePresence>
  </main>
);
};

export default MobileApp;

```

The stack is an array of route records. Opening an app appends a record; going back slices off the last record. The last item is active. A timestamp key makes repeated openings distinct for animation. AnimatePresence keeps the outgoing screen mounted long enough to play its exit transition.

Mobile layer	Owns
data/apps.js	App ids, names, icons, and home/dock placement.
HomeScreen.jsx	Widgets, app icons, and open-app requests.
AppFrame.jsx	Shared status/header/back frame for an active app.
MobileApp.jsx	Stack navigation and app-component registry.
apps/*.jsx	Individual mobile feature UI.
styles.css	Phone shell and mini-app visual system.

Chapter 3: Browser APIs as Dependencies

Chapter outcome: You will handle persistence, cross-tab events, geolocation, and network cleanup deliberately.

Local todo persistence hook

```
import { useEffect, useMemo, useState } from "react";

const STORAGE_KEY = "macfolio.mobile.todos";
const TODOS_EVENT = "macfolio:todos-updated";

const DEFAULT_TODOS = [
  { id: "ship-portfolio", text: "Polish mobile portfolio", completed: false },
  { id: "review-projects", text: "Review project cards", completed: false },
  { id: "share-link", text: "Share resume link", completed: true },
];

const readTodos = () => {
  try {
    const saved = localStorage.getItem(STORAGE_KEY);
    if (!saved) return DEFAULT_TODOS;
    const parsed = JSON.parse(saved);
    return Array.isArray(parsed) ? parsed : DEFAULT_TODOS;
  } catch {
    return DEFAULT_TODOS;
  }
};

const writeTodos = (todos) => {
  localStorage.setItem(STORAGE_KEY, JSON.stringify(todos));
  window.dispatchEvent(new CustomEvent(TODOS_EVENT, { detail: todos }));
};

export const useTodos = () => {
  const [todos, setTodos] = useState(readTodos());

  useEffect(() => {
    const syncTodos = (event) => {
      setTodos(event.detail || readTodos());
    };

    const syncStorage = () => setTodos(readTodos());

    window.addEventListener(TODOS_EVENT, syncTodos);
    window.addEventListener("storage", syncStorage);

    return () => {
      window.removeEventListener(TODOS_EVENT, syncTodos);
      window.removeEventListener("storage", syncStorage);
    };
  }, []);

  const stats = useMemo(() => {
    const completed = todos.filter((todo) => todo.completed).length;
    return {
      total: todos.length,
      completed,
      active: todos.length - completed,
    };
  }, []);
};
```

```

}, [todos]);

const commit = (updater) => {
  setTodos((current) => {
    const next = typeof updater === "function" ? updater(current) : updater;
    writeTodos(next);
    return next;
  });
};

const addTodo = (text) => {
  const trimmed = text.trim();
  if (!trimmed) return;

  commit((current) => [
    {
      id: `${Date.now()}-${trimmed.toLowerCase().replace(/\s+/g, "-")}`,
      text: trimmed,
      completed: false,
    },
    ...current,
  ]);
};

const toggleTodo = (id) => {
  commit((current) =>
    current.map((todo) =>
      todo.id === id ? { ...todo, completed: !todo.completed } : todo
    )
  );
};

const deleteTodo = (id) => {
  commit((current) => current.filter((todo) => todo.id !== id));
};

return { todos, stats, addTodo, toggleTodo, deleteTodo };
};

```

`useState(readTodos)` passes a function, so storage is read only during initial state creation. `commit` computes the next immutable array, writes JSON, dispatches a same-tab custom event, and returns the new state. The storage event covers other tabs; the custom event covers components in the current tab.

Geolocation with a fallback

```

    return;
  }

  navigator.geolocation.getCurrentPosition(
    (position) =>
      resolve({
        name: FALLBACK_LOCATION.name,
        latitude: position.coords.latitude,
        longitude: position.coords.longitude,
      }),
    () => resolve(FALLBACK_LOCATION),
    { enableHighAccuracy: false, timeout: 4500, maximumAge: 1000 * 60 * 20 }
  );
});

const resolvePlaceName = async (location) => {

```

```

if (location.name !== FALLBACK_LOCATION.name) return location.name;

const params = new URLSearchParams({
  latitude: String(location.latitude),
  longitude: String(location.longitude),
  localityLanguage: "en",
});

try {
  const response = await fetch(
    `https://api.bigdatacloud.net/data/reverse-geocode-client?${params}`
  );
  if (!response.ok) throw new Error("Reverse geocoding failed");
  const data = await response.json();
  const primary =
    data.locality ||
    data.localityInfo?.administrative?.find((item) => item.adminLevel >= 8)?.name ||
    data.city ||
    data.principalSubdivision ||
    FALLBACK_LOCATION.name;
  const secondary =
    primary !== data.city ? data.city : data.principalSubdivision;

```

Permission design: Geolocation can be denied, unavailable, or slow. The fallback is part of the feature contract, not an afterthought. Good browser code treats permission and network failure as normal branches.

Chapter 4: Quality and Deployment

Chapter outcome: You will verify the project like an engineer and ship a reproducible production build.

1. Run `npm run lint` and fix errors rather than suppressing unfamiliar rules.
2. Run `npm run build` to catch bundling and import problems.
3. Test desktop at wide and short viewports; test mobile around the 768px boundary.
4. Open, focus, minimize, restore, drag, and maximize every desktop window.
5. Test GitHub failure, geolocation denial, empty storage, and corrupted storage.
6. Check keyboard focus, button labels, image alt text, contrast, and reduced motion.
7. Deploy the dist output to a static host and configure `VITE_GITHUB_USERNAME` at build time.

Definition of done: A feature is complete when behavior, failure states, architecture notes, and verification all agree. A pretty happy path is only one slice of production quality.

Chapter 5: Future Architecture Without Premature Complexity

Chapter outcome: You will distinguish the next sensible improvement from enterprise theater.

If this happens	Then consider	Do not add yet

If this happens	Then consider	Do not add yet
More data sources	A portfolio repository interface and adapters.	A generic plugin framework.
More remote state	A query cache with retries and stale times.	A global store for every request.
More desktop apps	An app registry that contains component loaders and metadata.	Dynamic micro-frontends.
More contributors	Feature ownership docs, tests, lint boundaries.	A monorepo without separate products.
Private GitHub data	A small server/API route.	Secrets in client environment variables.
CSS collisions	Feature styles and shared tokens.	A complete design-system package immediately.

Checkpoint

- Beginner: Explain specificity without using the word important.
- Intermediate: Design state ownership for a mobile Notes app with persistence.
- Advanced: Propose the next three refactors and justify their order by risk and value.

Appendix A: Complete Repository Atlas

Coverage statement: 180 files discovered, 180 files read or inspected, 0 unread, 100% repository coverage. Text files were decoded and analyzed; raster/PDF assets were inspected through metadata and visual contact sheets. Each entry below records the file's role, dependencies, execution story, design choice, alternative, and growth note.

A.1 AGENTS.md

Lens	Analysis
Purpose	RESPONSIBILITY:
Responsibility	Provide the focused configuration or artifact described by its purpose.
Dependencies / imports	Human readers and future maintainers.
Exports	None
Execution flow	Consumed during install, build, development, or browser rendering.
Design decision	The file has one primary responsibility and follows the repository's existing convention.
Alternative	The same behavior could be colocated in a caller, but separation is useful when ownership or reuse is clear.
Scaling note	Keep the responsibility narrow and revisit the abstraction only after repeated real change pressure.

A.2 README.md

Lens	Analysis
Purpose	Support the project through the README.md artifact.
Responsibility	Provide the focused configuration or artifact described by its purpose.
Dependencies / imports	Human readers and future maintainers.
Exports	None

Lens	Analysis
Execution flow	Consumed during install, build, development, or browser rendering.
Design decision	The file has one primary responsibility and follows the repository's existing convention.
Alternative	The same behavior could be colocated in a caller, but separation is useful when ownership or reuse is clear.
Scaling note	Keep the responsibility narrow and revisit the abstraction only after repeated real change pressure.

A.3 docs/architecture/current-folder-structure.md

Lens	Analysis
Purpose	Teach or record the engineering topic represented by current-folder-structure.md.
Responsibility	Preserve reasoning and learning material as part of the repository.
Dependencies / imports	Human readers and future maintainers.
Exports	so
Execution flow	A developer reads it before or after implementation to understand context and tradeoffs.
Design decision	The file has one primary responsibility and follows the repository's existing convention.
Alternative	Reasoning could remain in chat or commit messages, but dedicated docs are easier to discover and teach from.
Scaling note	Update alongside behavior so the document remains trustworthy as the team grows.

A.4 docs/architecture/recommended-folder-structure.md

Lens	Analysis
Purpose	Teach or record the engineering topic represented by recommended-folder-structure.md.
Responsibility	Preserve reasoning and learning material as part of the repository.

Lens	Analysis
Dependencies / imports	Human readers and future maintainers.
Exports	None
Execution flow	A developer reads it before or after implementation to understand context and tradeoffs.
Design decision	The file has one primary responsibility and follows the repository's existing convention.
Alternative	Reasoning could remain in chat or commit messages, but dedicated docs are easier to discover and teach from.
Scaling note	Update alongside behavior so the document remains trustworthy as the team grows.

A.5 docs/architecture/system-overview.md

Lens	Analysis
Purpose	Teach or record the engineering topic represented by system-overview.md.
Responsibility	Preserve reasoning and learning material as part of the repository.
Dependencies / imports	Human readers and future maintainers.
Exports	None
Execution flow	A developer reads it before or after implementation to understand context and tradeoffs.
Design decision	The file has one primary responsibility and follows the repository's existing convention.
Alternative	Reasoning could remain in chat or commit messages, but dedicated docs are easier to discover and teach from.
Scaling note	Update alongside behavior so the document remains trustworthy as the team grows.

A.6 docs/decisions/0001-use-feature-based-architecture-gradually.md

Lens	Analysis
Purpose	Teach or record the engineering topic represented by 0001-use-feature-based-architecture-gradually.md.
Responsibility	Preserve reasoning and learning material as part of the repository.
Dependencies / imports	Human readers and future maintainers.
Exports	None
Execution flow	A developer reads it before or after implementation to understand context and tradeoffs.
Design decision	An ADR preserves context, choice, consequences, and tradeoffs rather than only the final code.
Alternative	Reasoning could remain in chat or commit messages, but dedicated docs are easier to discover and teach from.
Scaling note	Update alongside behavior so the document remains trustworthy as the team grows.

A.7 docs/decisions/0002-keep-desktop-and-mobile-shells-separated.md

Lens	Analysis
Purpose	Teach or record the engineering topic represented by 0002-keep-desktop-and-mobile-shells-separated.md.
Responsibility	Preserve reasoning and learning material as part of the repository.
Dependencies / imports	Human readers and future maintainers.
Exports	None
Execution flow	A developer reads it before or after implementation to understand context and tradeoffs.
Design decision	An ADR preserves context, choice, consequences, and tradeoffs rather than only the final code.
Alternative	Reasoning could remain in chat or commit messages, but dedicated docs are easier to discover and

Lens	Analysis
	teach from.
Scaling note	Update alongside behavior so the document remains trustworthy as the team grows.

A.8 docs/decisions/0003-create-a-portfolio-data-boundary.md

Lens	Analysis
Purpose	Teach or record the engineering topic represented by 0003-create-a-portfolio-data-boundary.md.
Responsibility	Preserve reasoning and learning material as part of the repository.
Dependencies / imports	Human readers and future maintainers.
Exports	None
Execution flow	A developer reads it before or after implementation to understand context and tradeoffs.
Design decision	An ADR preserves context, choice, consequences, and tradeoffs rather than only the final code.
Alternative	Reasoning could remain in chat or commit messages, but dedicated docs are easier to discover and teach from.
Scaling note	Update alongside behavior so the document remains trustworthy as the team grows.

A.9 docs/decisions/0004-split-constants-by-ownership.md

Lens	Analysis
Purpose	Teach or record the engineering topic represented by 0004-split-constants-by-ownership.md.
Responsibility	Preserve reasoning and learning material as part of the repository.
Dependencies / imports	Human readers and future maintainers.
Exports	None

Lens	Analysis
Execution flow	A developer reads it before or after implementation to understand context and tradeoffs.
Design decision	An ADR preserves context, choice, consequences, and tradeoffs rather than only the final code.
Alternative	Reasoning could remain in chat or commit messages, but dedicated docs are easier to discover and teach from.
Scaling note	Update alongside behavior so the document remains trustworthy as the team grows.

A.10 docs/decisions/0005-extract-desktop-shell-boundary.md

Lens	Analysis
Purpose	Teach or record the engineering topic represented by 0005-extract-desktop-shell-boundary.md.
Responsibility	Preserve reasoning and learning material as part of the repository.
Dependencies / imports	Human readers and future maintainers.
Exports	None
Execution flow	A developer reads it before or after implementation to understand context and tradeoffs.
Design decision	An ADR preserves context, choice, consequences, and tradeoffs rather than only the final code.
Alternative	Reasoning could remain in chat or commit messages, but dedicated docs are easier to discover and teach from.
Scaling note	Update alongside behavior so the document remains trustworthy as the team grows.

A.11 docs/decisions/0006-extract-code-preview-boundary.md

Lens	Analysis
Purpose	Teach or record the engineering topic represented by 0006-extract-code-preview-boundary.md.
Responsibility	Preserve reasoning and learning material as part of the repository.

Lens	Analysis
Dependencies / imports	Human readers and future maintainers.
Exports	None
Execution flow	A developer reads it before or after implementation to understand context and tradeoffs.
Design decision	An ADR preserves context, choice, consequences, and tradeoffs rather than only the final code.
Alternative	Reasoning could remain in chat or commit messages, but dedicated docs are easier to discover and teach from.
Scaling note	Update alongside behavior so the document remains trustworthy as the team grows.

A.12 docs/decisions/0007-lazy-load-shell-apps.md

Lens	Analysis
Purpose	Teach or record the engineering topic represented by 0007-lazy-load-shell-apps.md.
Responsibility	Preserve reasoning and learning material as part of the repository.
Dependencies / imports	Human readers and future maintainers.
Exports	None
Execution flow	A developer reads it before or after implementation to understand context and tradeoffs.
Design decision	An ADR preserves context, choice, consequences, and tradeoffs rather than only the final code.
Alternative	Reasoning could remain in chat or commit messages, but dedicated docs are easier to discover and teach from.
Scaling note	Update alongside behavior so the document remains trustworthy as the team grows.

A.13 docs/decisions/0008-move-mobile-shell-boundary.md

Lens	Analysis
Purpose	Teach or record the engineering topic represented by 0008-move-mobile-shell-boundary.md.
Responsibility	Preserve reasoning and learning material as part of the repository.
Dependencies / imports	Human readers and future maintainers.
Exports	None
Execution flow	A developer reads it before or after implementation to understand context and tradeoffs.
Design decision	An ADR preserves context, choice, consequences, and tradeoffs rather than only the final code.
Alternative	Reasoning could remain in chat or commit messages, but dedicated docs are easier to discover and teach from.
Scaling note	Update alongside behavior so the document remains trustworthy as the team grows.

A.14 docs/decisions/0009-create-app-composition-boundary.md

Lens	Analysis
Purpose	Teach or record the engineering topic represented by 0009-create-app-composition-boundary.md.
Responsibility	Preserve reasoning and learning material as part of the repository.
Dependencies / imports	Human readers and future maintainers.
Exports	None
Execution flow	A developer reads it before or after implementation to understand context and tradeoffs.
Design decision	An ADR preserves context, choice, consequences, and tradeoffs rather than only the final code.
Alternative	Reasoning could remain in chat or commit messages, but dedicated docs are easier to discover and teach from.

Lens	Analysis
Scaling note	Update alongside behavior so the document remains trustworthy as the team grows.

A.15 docs/decisions/0010-use-public-github-requests-in-browser.md

Lens	Analysis
Purpose	Teach or record the engineering topic represented by 0010-use-public-github-requests-in-browser.md.
Responsibility	Preserve reasoning and learning material as part of the repository.
Dependencies / imports	Human readers and future maintainers.
Exports	None
Execution flow	A developer reads it before or after implementation to understand context and tradeoffs.
Design decision	An ADR preserves context, choice, consequences, and tradeoffs rather than only the final code.
Alternative	Reasoning could remain in chat or commit messages, but dedicated docs are easier to discover and teach from.
Scaling note	Update alongside behavior so the document remains trustworthy as the team grows.

A.16 docs/diagrams/app-data-flow.md

Lens	Analysis
Purpose	Teach or record the engineering topic represented by app-data-flow.md.
Responsibility	Preserve reasoning and learning material as part of the repository.
Dependencies / imports	Human readers and future maintainers.
Exports	None

Lens	Analysis
Execution flow	A developer reads it before or after implementation to understand context and tradeoffs.
Design decision	The file has one primary responsibility and follows the repository's existing convention.
Alternative	Reasoning could remain in chat or commit messages, but dedicated docs are easier to discover and teach from.
Scaling note	Update alongside behavior so the document remains trustworthy as the team grows.

A.17 docs/lessons/feature-decomposition.md

Lens	Analysis
Purpose	Teach or record the engineering topic represented by feature-decomposition.md.
Responsibility	Preserve reasoning and learning material as part of the repository.
Dependencies / imports	Human readers and future maintainers.
Exports	None
Execution flow	A developer reads it before or after implementation to understand context and tradeoffs.
Design decision	The file has one primary responsibility and follows the repository's existing convention.
Alternative	Reasoning could remain in chat or commit messages, but dedicated docs are easier to discover and teach from.
Scaling note	Update alongside behavior so the document remains trustworthy as the team grows.

A.18 docs/lessons/hidden-global-state.md

Lens	Analysis
Purpose	Teach or record the engineering topic represented by hidden-global-state.md.
Responsibility	Preserve reasoning and learning material as part of the repository.

Lens	Analysis
Dependencies / imports	Human readers and future maintainers.
Exports	None
Execution flow	A developer reads it before or after implementation to understand context and tradeoffs.
Design decision	The file has one primary responsibility and follows the repository's existing convention.
Alternative	Reasoning could remain in chat or commit messages, but dedicated docs are easier to discover and teach from.
Scaling note	Update alongside behavior so the document remains trustworthy as the team grows.

A.19 docs/lessons/window-state-management.md

Lens	Analysis
Purpose	Teach or record the engineering topic represented by window-state-management.md.
Responsibility	Preserve reasoning and learning material as part of the repository.
Dependencies / imports	Human readers and future maintainers.
Exports	None
Execution flow	A developer reads it before or after implementation to understand context and tradeoffs.
Design decision	The file has one primary responsibility and follows the repository's existing convention.
Alternative	Reasoning could remain in chat or commit messages, but dedicated docs are easier to discover and teach from.
Scaling note	Update alongside behavior so the document remains trustworthy as the team grows.

A.20 docs/tutorials/building-a-macos-portfolio-ui.md

Lens	Analysis
Purpose	Teach or record the engineering topic represented by building-a-macos-portfolio-ui.md.
Responsibility	Preserve reasoning and learning material as part of the repository.
Dependencies / imports	Human readers and future maintainers.
Exports	None
Execution flow	A developer reads it before or after implementation to understand context and tradeoffs.
Design decision	The file has one primary responsibility and follows the repository's existing convention.
Alternative	Reasoning could remain in chat or commit messages, but dedicated docs are easier to discover and teach from.
Scaling note	Update alongside behavior so the document remains trustworthy as the team grows.

A.21 eslint.config.js

Lens	Analysis
Purpose	Implement or expose the eslint.config module in its owning folder.
Responsibility	Provide the focused configuration or artifact described by its purpose.
Dependencies / imports	@eslint/js, globals, eslint-plugin-react-hooks, eslint-plugin-react-refresh, eslint/config
Exports	defineConfig
Execution flow	The importing module evaluates this file; React or its caller invokes the exported behavior.
Design decision	The file has one primary responsibility and follows the repository's existing convention.
Alternative	The same behavior could be colocated in a caller, but separation is useful when ownership or reuse is clear.

Lens	Analysis
Scaling note	Keep the responsibility narrow and revisit the abstraction only after repeated real change pressure.

A.22 index.html

Lens	Analysis
Purpose	Support the project through the index.html artifact.
Responsibility	Provide the focused configuration or artifact described by its purpose.
Dependencies / imports	No JavaScript imports.
Exports	None
Execution flow	Consumed during install, build, development, or browser rendering.
Design decision	The file has one primary responsibility and follows the repository's existing convention.
Alternative	The same behavior could be colocated in a caller, but separation is useful when ownership or reuse is clear.
Scaling note	Keep the responsibility narrow and revisit the abstraction only after repeated real change pressure.

A.23 jsconfig.json

Lens	Analysis
Purpose	Support the project through the jsconfig.json artifact.
Responsibility	Provide the focused configuration or artifact described by its purpose.
Dependencies / imports	No JavaScript imports.
Exports	None
Execution flow	Consumed during install, build, development, or browser rendering.

Lens	Analysis
Design decision	The file has one primary responsibility and follows the repository's existing convention.
Alternative	The same behavior could be colocated in a caller, but separation is useful when ownership or reuse is clear.
Scaling note	Keep the responsibility narrow and revisit the abstraction only after repeated real change pressure.

A.24 package-lock.json

Lens	Analysis
Purpose	Pin the complete npm dependency graph for reproducible installs.
Responsibility	Provide the focused configuration or artifact described by its purpose.
Dependencies / imports	No JavaScript imports.
Exports	None
Execution flow	Consumed during install, build, development, or browser rendering.
Design decision	The file has one primary responsibility and follows the repository's existing convention.
Alternative	The same behavior could be colocated in a caller, but separation is useful when ownership or reuse is clear.
Scaling note	Keep the responsibility narrow and revisit the abstraction only after repeated real change pressure.

A.25 package.json

Lens	Analysis
Purpose	Declare project scripts, runtime dependencies, and development dependencies.
Responsibility	Provide the focused configuration or artifact described by its purpose.
Dependencies /	No JavaScript imports.

Lens	Analysis
imports	
Exports	None
Execution flow	Consumed during install, build, development, or browser rendering.
Design decision	The file has one primary responsibility and follows the repository's existing convention.
Alternative	The same behavior could be colocated in a caller, but separation is useful when ownership or reuse is clear.
Scaling note	Keep the responsibility narrow and revisit the abstraction only after repeated real change pressure.

A.26 public/files/resume.pdf

Lens	Analysis
Purpose	One-page resume document rendered by the desktop and mobile resume experiences.
Responsibility	Store the downloadable/viewable resume artifact.
Dependencies / imports	react-pdf and direct browser download links.
Exports	Static /files/resume.pdf URL
Execution flow	The browser fetches the PDF; react-pdf parses it and paints the requested page.
Design decision	Static user-facing assets live under public so their URLs remain simple and build-independent.
Alternative	The same behavior could be colocated in a caller, but separation is useful when ownership or reuse is clear.
Scaling note	Optimize dimensions and formats, add descriptive alt usage, and consider a CDN only when traffic or payload warrants it.

A.27 public/icons/atom.svg

Lens	Analysis
Purpose	Vector icon or logo served as a static visual asset.
Responsibility	Provide presentation only; application decisions remain in JavaScript modules.
Dependencies / imports	Browser SVG renderer and the JSX/CSS path that references it.
Exports	None
Execution flow	The browser loads and rasterizes vector paths when an img reference becomes visible.
Design decision	Static user-facing assets live under public so their URLs remain simple and build-independent.
Alternative	An icon library or generated asset could replace it if licensing, consistency, or bundle goals change.
Scaling note	Optimize dimensions and formats, add descriptive alt usage, and consider a CDN only when traffic or payload warrants it.

A.28 public/icons/edit.svg

Lens	Analysis
Purpose	Vector icon or logo served as a static visual asset.
Responsibility	Provide presentation only; application decisions remain in JavaScript modules.
Dependencies / imports	Browser SVG renderer and the JSX/CSS path that references it.
Exports	None
Execution flow	The browser loads and rasterizes vector paths when an img reference becomes visible.
Design decision	Static user-facing assets live under public so their URLs remain simple and build-independent.
Alternative	An icon library or generated asset could replace it if licensing, consistency, or bundle goals change.
Scaling note	Optimize dimensions and formats, add descriptive alt usage, and consider a CDN only when traffic

Lens	Analysis
	or payload warrants it.

A.29 public/icons/file.svg

Lens	Analysis
Purpose	Vector icon or logo served as a static visual asset.
Responsibility	Provide presentation only; application decisions remain in JavaScript modules.
Dependencies / imports	Browser SVG renderer and the JSX/CSS path that references it.
Exports	None
Execution flow	The browser loads and rasterizes vector paths when an img reference becomes visible.
Design decision	Static user-facing assets live under public so their URLs remain simple and build-independent.
Alternative	An icon library or generated asset could replace it if licensing, consistency, or bundle goals change.
Scaling note	Optimize dimensions and formats, add descriptive alt usage, and consider a CDN only when traffic or payload warrants it.

A.30 public/icons/gicon1.svg

Lens	Analysis
Purpose	Vector icon or logo served as a static visual asset.
Responsibility	Provide presentation only; application decisions remain in JavaScript modules.
Dependencies / imports	Browser SVG renderer and the JSX/CSS path that references it.
Exports	None
Execution flow	The browser loads and rasterizes vector paths when an img reference becomes visible.

Lens	Analysis
Design decision	Static user-facing assets live under public so their URLs remain simple and build-independent.
Alternative	An icon library or generated asset could replace it if licensing, consistency, or bundle goals change.
Scaling note	Optimize dimensions and formats, add descriptive alt usage, and consider a CDN only when traffic or payload warrants it.

A.31 public/icons/gicon2.svg

Lens	Analysis
Purpose	Vector icon or logo served as a static visual asset.
Responsibility	Provide presentation only; application decisions remain in JavaScript modules.
Dependencies / imports	Browser SVG renderer and the JSX/CSS path that references it.
Exports	None
Execution flow	The browser loads and rasterizes vector paths when an img reference becomes visible.
Design decision	Static user-facing assets live under public so their URLs remain simple and build-independent.
Alternative	An icon library or generated asset could replace it if licensing, consistency, or bundle goals change.
Scaling note	Optimize dimensions and formats, add descriptive alt usage, and consider a CDN only when traffic or payload warrants it.

A.32 public/icons/gicon4.svg

Lens	Analysis
Purpose	Vector icon or logo served as a static visual asset.
Responsibility	Provide presentation only; application decisions remain in JavaScript modules.
Dependencies /	Browser SVG renderer and the JSX/CSS path that references it.

Lens	Analysis
imports	
Exports	None
Execution flow	The browser loads and rasterizes vector paths when an img reference becomes visible.
Design decision	Static user-facing assets live under public so their URLs remain simple and build-independent.

Design decision	Static user-facing assets live under public so their URLs remain simple and build-independent.
Alternative	An icon library or generated asset could replace it if licensing, consistency, or bundle goals change.
Scaling note	Optimize dimensions and formats, add descriptive alt usage, and consider a CDN only when traffic or payload warrants it.

A.71 public/images/gal2.png

Lens	Analysis
Purpose	Visual asset (232x200 RGBA) used by the portfolio interface or content gallery.
Responsibility	Provide a stable browser-loadable image; it contains no application behavior.
Dependencies / imports	Loaded by CSS, JSX, or portfolio content through a /public path.
Exports	Static file URL
Execution flow	Vite serves the file unchanged; the browser decodes and paints it when referenced.
Design decision	Static user-facing assets live under public so their URLs remain simple and build-independent.
Alternative	An icon library or generated asset could replace it if licensing, consistency, or bundle goals change.
Scaling note	Optimize dimensions and formats, add descriptive alt usage, and consider a CDN only when traffic or payload warrants it.

A.72 public/images/gal3.png

Lens	Analysis
Purpose	Visual asset (600x326 RGBA) used by the portfolio interface or content gallery.
Responsibility	Provide a stable browser-loadable image; it contains no application behavior.
Dependencies / imports	Loaded by CSS, JSX, or portfolio content through a /public path.
Exports	Static file URL
Execution flow	Vite serves the file unchanged; the browser decodes and paints it when referenced.
Design decision	Static user-facing assets live under public so their URLs remain simple and build-independent.
Alternative	An icon library or generated asset could replace it if licensing, consistency, or bundle goals change.
Scaling note	Optimize dimensions and formats, add descriptive alt usage, and consider a CDN only when traffic or payload warrants it.

A.73 public/images/gal4.png

Lens	Analysis
Purpose	Visual asset (600x326 RGBA) used by the portfolio interface or content gallery.
Responsibility	Provide a stable browser-loadable image; it contains no application behavior.
Dependencies / imports	Loaded by CSS, JSX, or portfolio content through a /public path.
Exports	Static file URL
Execution flow	Vite serves the file unchanged; the browser decodes and paints it when referenced.
Design decision	Static user-facing assets live under public so their URLs remain simple and build-independent.
Alternative	An icon library or generated asset could replace it if licensing, consistency, or bundle goals change.
Scaling note	Optimize dimensions and formats, add descriptive alt usage, and consider a CDN only when traffic

Lens	Analysis
	or payload warrants it.

A.74 public/images/image.png

Lens	Analysis
Purpose	Visual asset (84x120 RGBA) used by the portfolio interface or content gallery.
Responsibility	Provide a stable browser-loadable image; it contains no application behavior.
Dependencies / imports	Loaded by CSS, JSX, or portfolio content through a /public path.
Exports	Static file URL
Execution flow	Vite serves the file unchanged; the browser decodes and paints it when referenced.
Design decision	Static user-facing assets live under public so their URLs remain simple and build-independent.
Alternative	An icon library or generated asset could replace it if licensing, consistency, or bundle goals change.
Scaling note	Optimize dimensions and formats, add descriptive alt usage, and consider a CDN only when traffic or payload warrants it.

A.75 public/images/logo.svg

Lens	Analysis
Purpose	Vector icon or logo served as a static visual asset.
Responsibility	Provide presentation only; application decisions remain in JavaScript modules.
Dependencies / imports	Browser SVG renderer and the JSX/CSS path that references it.
Exports	None
Execution flow	The browser loads and rasterizes vector paths when an img reference becomes visible.

Lens	Analysis
Design decision	Static user-facing assets live under public so their URLs remain simple and build-independent.
Alternative	An icon library or generated asset could replace it if licensing, consistency, or bundle goals change.
Scaling note	Optimize dimensions and formats, add descriptive alt usage, and consider a CDN only when traffic or payload warrants it.

A.76 public/images/pdf.png

Lens	Analysis
Purpose	Visual asset (73x72 RGBA) used by the portfolio interface or content gallery.
Responsibility	Provide a stable browser-loadable image; it contains no application behavior.
Dependencies / imports	Loaded by CSS, JSX, or portfolio content through a /public path.
Exports	Static file URL
Execution flow	Vite serves the file unchanged; the browser decodes and paints it when referenced.
Design decision	Static user-facing assets live under public so their URLs remain simple and build-independent.
Alternative	An icon library or generated asset could replace it if licensing, consistency, or bundle goals change.
Scaling note	Optimize dimensions and formats, add descriptive alt usage, and consider a CDN only when traffic or payload warrants it.

A.77 public/images/photos.png

Lens	Analysis
Purpose	Visual asset (141x142 RGBA) used by the portfolio interface or content gallery.
Responsibility	Provide a stable browser-loadable image; it contains no application behavior.
Dependencies /	Loaded by CSS, JSX, or portfolio content through a /public path.

Lens	Analysis
imports	
Exports	Static file URL
Execution flow	Vite serves the file unchanged; the browser decodes and paints it when referenced.
Design decision	Static user-facing assets live under public so their URLs remain simple and build-independent.
Alternative	An icon library or generated asset could replace it if licensing, consistency, or bundle goals change.
Scaling note	Optimize dimensions and formats, add descriptive alt usage, and consider a CDN only when traffic or payload warrants it.

A.78 public/images/plain.png

Lens	Analysis
Purpose	Visual asset (44x60 RGBA) used by the portfolio interface or content gallery.
Responsibility	Provide a stable browser-loadable image; it contains no application behavior.
Dependencies / imports	Loaded by CSS, JSX, or portfolio content through a /public path.
Exports	Static file URL
Execution flow	Vite serves the file unchanged; the browser decodes and paints it when referenced.
Design decision	Static user-facing assets live under public so their URLs remain simple and build-independent.
Alternative	An icon library or generated asset could replace it if licensing, consistency, or bundle goals change.
Scaling note	Optimize dimensions and formats, add descriptive alt usage, and consider a CDN only when traffic or payload warrants it.

A.79 public/images/project-1.png

Lens	Analysis
------	----------

Lens	Analysis
Purpose	Visual asset (2880x1590 P) used by the portfolio interface or content gallery.
Responsibility	Provide a stable browser-loadable image; it contains no application behavior.

Scaling note	Optimize dimensions and formats, add descriptive alt usage, and consider a CDN only when traffic or payload warrants it.

A.89 public/images/wallpaper.png

Lens	Analysis
Purpose	Visual asset (2880x1800 P) used by the portfolio interface or content gallery.
Responsibility	Provide a stable browser-loadable image; it contains no application behavior.
Dependencies / imports	Loaded by CSS, JSX, or portfolio content through a /public path.
Exports	Static file URL
Execution flow	Vite serves the file unchanged; the browser decodes and paints it when referenced.
Design decision	Static user-facing assets live under public so their URLs remain simple and build-independent.
Alternative	An icon library or generated asset could replace it if licensing, consistency, or bundle goals change.
Scaling note	Optimize dimensions and formats, add descriptive alt usage, and consider a CDN only when traffic or payload warrants it.

A.90 public/macbook.png

Lens	Analysis
Purpose	Visual asset (100x100 RGBA) used by the portfolio interface or content gallery.
Responsibility	Provide a stable browser-loadable image; it contains no application behavior.
Dependencies / imports	Loaded by CSS, JSX, or portfolio content through a /public path.
Exports	Static file URL
Execution flow	Vite serves the file unchanged; the browser decodes and paints it when referenced.
Design decision	Static user-facing assets live under public so their URLs remain simple and build-independent.
Alternative	An icon library or generated asset could replace it if licensing, consistency, or bundle goals change.
Scaling note	Optimize dimensions and formats, add descriptive alt usage, and consider a CDN only when traffic or payload warrants it.

A.91 public/vite.svg

Lens	Analysis
Purpose	Vector icon or logo served as a static visual asset.
Responsibility	Provide presentation only; application decisions remain in JavaScript modules.
Dependencies / imports	Browser SVG renderer and the JSX/CSS path that references it.
Exports	None
Execution flow	The browser loads and rasterizes vector paths when an img reference becomes visible.
Design decision	Static user-facing assets live under public so their URLs remain simple and build-independent.
Alternative	An icon library or generated asset could replace it if licensing, consistency, or bundle goals change.
Scaling note	Optimize dimensions and formats, add descriptive alt usage, and consider a CDN only when traffic

Lens	Analysis
	or payload warrants it.

A.92 src/App.jsx

Lens	Analysis
Purpose	Preserve the existing App import path.
Responsibility	Render or coordinate the UI behavior implied by the file and its feature boundary.
Dependencies / imports	./app/App
Exports	the
Execution flow	The importing module evaluates this file; React or its caller invokes the exported behavior.
Design decision	The file has one primary responsibility and follows the repository's existing convention.
Alternative	The same behavior could be colocated in a caller, but separation is useful when ownership or reuse is clear.
Scaling note	Keep the responsibility narrow and revisit the abstraction only after repeated real change pressure.

A.93 src/api/github.js

Lens	Analysis
Purpose	Provide public GitHub API requests for portfolio repository data.
Responsibility	Communicate with an external service and return plain data.
Dependencies / imports	No JavaScript imports.
Exports	fetchRepos, fetchRepoTree
Execution flow	A feature requests data; fetch resolves; the module validates and returns a safe shape.

Lens	Analysis
Design decision	The file has one primary responsibility and follows the repository's existing convention.
Alternative	A server proxy would be preferable for secrets, private data, or stronger caching.
Scaling note	Keep the responsibility narrow and revisit the abstraction only after repeated real change pressure.

A.94 src/app/App.jsx

Lens	Analysis
Purpose	Compose the Macfolio application.
Responsibility	Render or coordinate the UI behavior implied by the file and its feature boundary.
Dependencies / imports	react, react-responsive, #components/Index, ../components/IntroLoader, ../features/portfolio/hooks/usePortfolioFileSystem, ../features/desktop-shell/components/Dock, ../features/desktop-shell/components/Home, ../features/desktop-shell/components/Navbar, ../features/desktop-shell/store/windowStore, #store, ../windows/Terminal, ../windows/Safari, ../windows/Resume, ../windows/Finder, ../windows/TextApp, ../windows/ImageApp, ../windows/Contact, ../windows/Gallery, ../windows/VsCode, ../features/mobile-shell/MobileApp, ../components/Welcome
Exports	App
Execution flow	The importing module evaluates this file; React or its caller invokes the exported behavior.
Design decision	The file has one primary responsibility and follows the repository's existing convention.
Alternative	The same behavior could be colocated in a caller, but separation is useful when ownership or reuse is clear.
Scaling note	Keep the responsibility narrow and revisit the abstraction only after repeated real change pressure.

A.95 src/components/Dock.jsx

Lens	Analysis
Purpose	Preserve the existing Dock import path.

Lens	Analysis
Responsibility	Render or coordinate the UI behavior implied by the file and its feature boundary.
Dependencies / imports	../features/desktop-shell/components/Dock
Exports	the
Execution flow	The importing module evaluates this file; React or its caller invokes the exported behavior.
Design decision	The path supports app-level UI or a gradual compatibility migration; avoid adding unrelated behavior.
Alternative	The same behavior could be colocated in a caller, but separation is useful when ownership or reuse is clear.
Scaling note	Retire compatibility paths after callers migrate; do not let the bridge become a second permanent architecture.

A.96 src/components/Editor.jsx

Lens	Analysis
Purpose	Preserve the existing Editor import path.
Responsibility	Render or coordinate the UI behavior implied by the file and its feature boundary.
Dependencies / imports	../features/code-preview/components/Editor
Exports	the
Execution flow	The importing module evaluates this file; React or its caller invokes the exported behavior.
Design decision	The path supports app-level UI or a gradual compatibility migration; avoid adding unrelated behavior.
Alternative	The same behavior could be colocated in a caller, but separation is useful when ownership or reuse is clear.
Scaling note	Retire compatibility paths after callers migrate; do not let the bridge become a second permanent

Lens	Analysis
	architecture.

A.97 src/components/ErrorMessage.jsx

Lens	Analysis
Purpose	Implement or expose the ErrorMessage module in its owning folder.
Responsibility	Render or coordinate the UI behavior implied by the file and its feature boundary.
Dependencies / imports	react
Exports	ErrorMessage
Execution flow	The importing module evaluates this file; React or its caller invokes the exported behavior.
Design decision	The path supports app-level UI or a gradual compatibility migration; avoid adding unrelated behavior.
Alternative	The same behavior could be colocated in a caller, but separation is useful when ownership or reuse is clear.
Scaling note	Retire compatibility paths after callers migrate; do not let the bridge become a second permanent architecture.

A.98 src/components/Explorer.jsx

Lens	Analysis
Purpose	Preserve the existing Explorer import path.
Responsibility	Render or coordinate the UI behavior implied by the file and its feature boundary.
Dependencies / imports	../features/code-preview/components/Explorer
Exports	the

Lens	Analysis
Execution flow	The importing module evaluates this file; React or its caller invokes the exported behavior.
Design decision	The path supports app-level UI or a gradual compatibility migration; avoid adding unrelated behavior.
Alternative	The same behavior could be colocated in a caller, but separation is useful when ownership or reuse is clear.
Scaling note	Retire compatibility paths after callers migrate; do not let the bridge become a second permanent architecture.

A.99 src/components/Home.jsx

Lens	Analysis
Purpose	Preserve the existing desktop Home import path.
Responsibility	Render or coordinate the UI behavior implied by the file and its feature boundary.
Dependencies / imports	../features/desktop-shell/components/Home
Exports	the
Execution flow	The importing module evaluates this file; React or its caller invokes the exported behavior.
Design decision	The path supports app-level UI or a gradual compatibility migration; avoid adding unrelated behavior.
Alternative	The same behavior could be colocated in a caller, but separation is useful when ownership or reuse is clear.
Scaling note	Retire compatibility paths after callers migrate; do not let the bridge become a second permanent architecture.

A.100 src/components/Index.js

Lens	Analysis
------	----------

Lens	Analysis
Purpose	Implement or expose the Index module in its owning folder.
Responsibility	Render or coordinate the UI behavior implied by the file and its feature boundary.
Dependencies / imports	#components/Navbar, #components/Welcome, #components/Dock, ./WindowControls, ./ErrorBoundary, ./LoadingSpinner, ./OptimizedImage, #components/Editor, #components/Explorer, #components/Terminal, ./Home
Exports	None
Execution flow	The importing module evaluates this file; React or its caller invokes the exported behavior.
Design decision	The path supports app-level UI or a gradual compatibility migration; avoid adding unrelated behavior.
Alternative	The same behavior could be colocated in a caller, but separation is useful when ownership or reuse is clear.
Scaling note	Retire compatibility paths after callers migrate; do not let the bridge become a second permanent architecture.

A.101 src/components/IntroLoader.jsx

Lens	Analysis
Purpose	Implement or expose the IntroLoader module in its owning folder.
Responsibility	Render or coordinate the UI behavior implied by the file and its feature boundary.
Dependencies / imports	react
Exports	IntroLoader
Execution flow	The importing module evaluates this file; React or its caller invokes the exported behavior.
Design decision	The path supports app-level UI or a gradual compatibility migration; avoid adding unrelated behavior.
Alternative	The same behavior could be colocated in a caller, but separation is useful when ownership or reuse

Lens	Analysis
	is clear.
Scaling note	Retire compatibility paths after callers migrate; do not let the bridge become a second permanent architecture.

A.102 src/components/LoadingSpinner.jsx

Lens	Analysis
Purpose	Implement or expose the LoadingSpinner module in its owning folder.
Responsibility	Render or coordinate the UI behavior implied by the file and its feature boundary.
Dependencies / imports	framer-motion
Exports	LoadingSpinner
Execution flow	The importing module evaluates this file; React or its caller invokes the exported behavior.
Design decision	The path supports app-level UI or a gradual compatibility migration; avoid adding unrelated behavior.
Alternative	The same behavior could be colocated in a caller, but separation is useful when ownership or reuse is clear.
Scaling note	Retire compatibility paths after callers migrate; do not let the bridge become a second permanent architecture.

A.103 src/components/Navbar.jsx

Lens	Analysis
Purpose	Preserve the existing Navbar import path.
Responsibility	Render or coordinate the UI behavior implied by the file and its feature boundary.
Dependencies /	../features/desktop-shell/components/Navbar

Lens	Analysis
imports	
Exports	the
Execution flow	The importing module evaluates this file; React or its caller invokes the exported behavior.
Design decision	The path supports app-level UI or a gradual compatibility migration; avoid adding unrelated behavior.
Alternative	The same behavior could be colocated in a caller, but separation is useful when ownership or reuse is clear.
Scaling note	Retire compatibility paths after callers migrate; do not let the bridge become a second permanent architecture.

A.104 src/components/OptimizedImage.jsx

Lens	Analysis
Purpose	Implement or expose the OptimizedImage module in its owning folder.
Responsibility	Render or coordinate the UI behavior implied by the file and its feature boundary.
Dependencies / imports	react, ./Index
Exports	OptimizedImage
Execution flow	The importing module evaluates this file; React or its caller invokes the exported behavior.
Design decision	The path supports app-level UI or a gradual compatibility migration; avoid adding unrelated behavior.
Alternative	The same behavior could be colocated in a caller, but separation is useful when ownership or reuse is clear.
Scaling note	Retire compatibility paths after callers migrate; do not let the bridge become a second permanent architecture.

A.105 src/components/Terminal.jsx

Lens	Analysis
Purpose	Preserve the existing code-preview Terminal import path.
Responsibility	Render or coordinate the UI behavior implied by the file and its feature boundary.
Dependencies / imports	../features/code-preview/components/Terminal
Exports	the
Execution flow	The importing module evaluates this file; React or its caller invokes the exported behavior.
Design decision	The path supports app-level UI or a gradual compatibility migration; avoid adding unrelated behavior.
Alternative	The same behavior could be colocated in a caller, but separation is useful when ownership or reuse is clear.
Scaling note	Retire compatibility paths after callers migrate; do not let the bridge become a second permanent architecture.

A.106 src/components/Welcome.jsx

Lens	Analysis
Purpose	Render the desktop welcome title and mobile clock welcome view.
Responsibility	Render or coordinate the UI behavior implied by the file and its feature boundary.
Dependencies / imports	react, react-responsive, dayjs, @gsap/react, gsap
Exports	Welcome
Execution flow	The importing module evaluates this file; React or its caller invokes the exported behavior.
Design decision	The path supports app-level UI or a gradual compatibility migration; avoid adding unrelated behavior.

Lens	Analysis
Alternative	The same behavior could be colocated in a caller, but separation is useful when ownership or reuse is clear.
Scaling note	Retire compatibility paths after callers migrate; do not let the bridge become a second permanent architecture.

A.107 `src/components/WindowControls.jsx`

Lens	Analysis
Purpose	Preserve the existing WindowControls import path.
Responsibility	Render or coordinate the UI behavior implied by the file and its feature boundary.
Dependencies / imports	<code>../features/desktop-shell/components/WindowControls</code>
Exports	the
Execution flow	The importing module evaluates this file; React or its caller invokes the exported behavior.
Design decision	The path supports app-level UI or a gradual compatibility migration; avoid adding unrelated behavior.
Alternative	The same behavior could be colocated in a caller, but separation is useful when ownership or reuse is clear.
Scaling note	Retire compatibility paths after callers migrate; do not let the bridge become a second permanent architecture.

A.108 `src/constants/desktopApps.js`

Lens	Analysis
Purpose	Define desktop dock application metadata.
Responsibility	Provide stable data/configuration without owning unrelated UI behavior.

Lens	Analysis
Dependencies / imports	No JavaScript imports.
Exports	dockApps
Execution flow	The importing module evaluates this file; React or its caller invokes the exported behavior.
Design decision	The file has one primary responsibility and follows the repository's existing convention.
Alternative	The same behavior could be colocated in a caller, but separation is useful when ownership or reuse is clear.
Scaling note	Keep the responsibility narrow and revisit the abstraction only after repeated real change pressure.

A.109 src/constants/index.js

Lens	Analysis
Purpose	Re-export application constants from focused ownership modules.
Responsibility	Provide stable data/configuration without owning unrelated UI behavior.
Dependencies / imports	./navigation, ./desktopApps, ./portfolioContent, ./locations, ./windowConfig
Exports	application
Execution flow	The importing module evaluates this file; React or its caller invokes the exported behavior.
Design decision	The file has one primary responsibility and follows the repository's existing convention.
Alternative	The same behavior could be colocated in a caller, but separation is useful when ownership or reuse is clear.
Scaling note	Keep the responsibility narrow and revisit the abstraction only after repeated real change pressure.

A.110 src/constants/locations.js

Lens	Analysis
Purpose	Define static Finder locations.
Responsibility	Provide stable data/configuration without owning unrelated UI behavior.
Dependencies / imports	./portfolioContent
Exports	locations
Execution flow	The importing module evaluates this file; React or its caller invokes the exported behavior.
Design decision	The file has one primary responsibility and follows the repository's existing convention.
Alternative	The same behavior could be colocated in a caller, but separation is useful when ownership or reuse is clear.
Scaling note	Keep the responsibility narrow and revisit the abstraction only after repeated real change pressure.

A.111 src/constants/navigation.js

Lens	Analysis
Purpose	Define top-level desktop navigation items.
Responsibility	Provide stable data/configuration without owning unrelated UI behavior.
Dependencies / imports	No JavaScript imports.
Exports	navLinks, navIcons
Execution flow	The importing module evaluates this file; React or its caller invokes the exported behavior.
Design decision	The file has one primary responsibility and follows the repository's existing convention.
Alternative	The same behavior could be colocated in a caller, but separation is useful when ownership or reuse is clear.

Lens	Analysis
Scaling note	Keep the responsibility narrow and revisit the abstraction only after repeated real change pressure.

A.112 src/constants/portfolioContent.js

Lens	Analysis
Purpose	Define static portfolio content.
Responsibility	Provide stable data/configuration without owning unrelated UI behavior.
Dependencies / imports	No JavaScript imports.
Exports	blogPosts, techStack, socials, photosLinks, gallery
Execution flow	The importing module evaluates this file; React or its caller invokes the exported behavior.
Design decision	The file has one primary responsibility and follows the repository's existing convention.
Alternative	The same behavior could be colocated in a caller, but separation is useful when ownership or reuse is clear.
Scaling note	Keep the responsibility narrow and revisit the abstraction only after repeated real change pressure.

A.113 src/constants/windowConfig.js

Lens	Analysis
Purpose	Preserve the existing constants import path for desktop window config.
Responsibility	Provide stable data/configuration without owning unrelated UI behavior.
Dependencies / imports	../features/desktop-shell/config/windowConfig
Exports	desktop
Execution flow	The importing module evaluates this file; React or its caller invokes the exported behavior.

Lens	Analysis
Design decision	The file has one primary responsibility and follows the repository's existing convention.
Alternative	The same behavior could be colocated in a caller, but separation is useful when ownership or reuse is clear.
Scaling note	Keep the responsibility narrow and revisit the abstraction only after repeated real change pressure.

A.114 `src/features/code-preview/components/Editor.jsx`

Lens	Analysis
Purpose	Render the Monaco source-code editor panel.
Responsibility	Render or coordinate the UI behavior implied by the file and its feature boundary.
Dependencies / imports	@monaco-editor/react, clsx, react
Exports	CodeEditor
Execution flow	The importing module evaluates this file; React or its caller invokes the exported behavior.
Design decision	Code is placed with the feature that owns its change, reinforcing feature-based architecture.
Alternative	The same behavior could be colocated in a caller, but separation is useful when ownership or reuse is clear.
Scaling note	Add subfolders only when the feature grows; preserve the boundary and keep cross-feature dependencies explicit.

A.115 `src/features/code-preview/components/Explorer.jsx`

Lens	Analysis
Purpose	Render the code-preview repository explorer.
Responsibility	Render or coordinate the UI behavior implied by the file and its feature boundary.

Lens	Analysis
Dependencies / imports	react, ../../utils/getFileIcon
Exports	Explorer
Execution flow	The importing module evaluates this file; React or its caller invokes the exported behavior.
Design decision	Code is placed with the feature that owns its change, reinforcing feature-based architecture.
Alternative	The same behavior could be colocated in a caller, but separation is useful when ownership or reuse is clear.
Scaling note	Add subfolders only when the feature grows; preserve the boundary and keep cross-feature dependencies explicit.

A.116 src/features/code-preview/components/Terminal.jsx

Lens	Analysis
Purpose	Render the code-preview terminal side panel.
Responsibility	Render or coordinate the UI behavior implied by the file and its feature boundary.
Dependencies / imports	No JavaScript imports.
Exports	Terminal
Execution flow	The importing module evaluates this file; React or its caller invokes the exported behavior.
Design decision	Code is placed with the feature that owns its change, reinforcing feature-based architecture.
Alternative	The same behavior could be colocated in a caller, but separation is useful when ownership or reuse is clear.
Scaling note	Add subfolders only when the feature grows; preserve the boundary and keep cross-feature dependencies explicit.

A.117 src/features/code-preview/windows/CodePreviewWindow.jsx

Lens	Analysis
Purpose	Render the desktop VS Code-style source preview window.
Responsibility	Render or coordinate the UI behavior implied by the file and its feature boundary.
Dependencies / imports	react, clsx, ../../api/github, ../../desktop-shell/components/WindowControls, ../../desktop-shell/hoc/windowWrapper, ../../desktop-shell/store/windowStore, ../components/Editor, ../components/Explorer, ../components/Terminal
Exports	CodePreviewWindow
Execution flow	The importing module evaluates this file; React or its caller invokes the exported behavior.
Design decision	Code is placed with the feature that owns its change, reinforcing feature-based architecture.
Alternative	The same behavior could be colocated in a caller, but separation is useful when ownership or reuse is clear.
Scaling note	Add subfolders only when the feature grows; preserve the boundary and keep cross-feature dependencies explicit.

A.118 src/features/desktop-shell/components/Dock.jsx

Lens	Analysis
Purpose	Render the desktop application dock.
Responsibility	Render or coordinate the UI behavior implied by the file and its feature boundary.
Dependencies / imports	react, react-tooltip, gsap, @gsap/react, ../../constants, ../../components/OptimizedImage, ../store/windowStore
Exports	Dock
Execution flow	The importing module evaluates this file; React or its caller invokes the exported behavior.
Design decision	Code is placed with the feature that owns its change, reinforcing feature-based architecture.
Alternative	The same behavior could be colocated in a caller, but separation is useful when ownership or reuse

Lens	Analysis
	is clear.
Scaling note	Add subfolders only when the feature grows; preserve the boundary and keep cross-feature dependencies explicit.

A.119 src/features/desktop-shell/components/Home.jsx

Lens	Analysis
Purpose	Render desktop icons on the simulated desktop.
Responsibility	Render or coordinate the UI behavior implied by the file and its feature boundary.
Dependencies / imports	react, clsx, @gsap/react, gsap, gsap/all, #store, ../store/windowStore
Exports	Home
Execution flow	The importing module evaluates this file; React or its caller invokes the exported behavior.
Design decision	Code is placed with the feature that owns its change, reinforcing feature-based architecture.
Alternative	The same behavior could be colocated in a caller, but separation is useful when ownership or reuse is clear.
Scaling note	Add subfolders only when the feature grows; preserve the boundary and keep cross-feature dependencies explicit.

A.120 src/features/desktop-shell/components/Navbar.jsx

Lens	Analysis
Purpose	Render the desktop top menu bar.
Responsibility	Render or coordinate the UI behavior implied by the file and its feature boundary.
Dependencies / imports	dayjs, react, ../../constants, ../../components/OptimizedImage, ../store/windowStore

Lens	Analysis
Exports	Navbar
Execution flow	The importing module evaluates this file; React or its caller invokes the exported behavior.
Design decision	Code is placed with the feature that owns its change, reinforcing feature-based architecture.
Alternative	The same behavior could be colocated in a caller, but separation is useful when ownership or reuse is clear.
Scaling note	Add subfolders only when the feature grows; preserve the boundary and keep cross-feature dependencies explicit.

A.121 src/features/desktop-shell/components/WindowControls.jsx

Lens	Analysis
Purpose	Render desktop window traffic-light controls.
Responsibility	Render or coordinate the UI behavior implied by the file and its feature boundary.
Dependencies / imports	react, ../store/windowStore
Exports	WindowControls
Execution flow	The importing module evaluates this file; React or its caller invokes the exported behavior.
Design decision	Code is placed with the feature that owns its change, reinforcing feature-based architecture.
Alternative	The same behavior could be colocated in a caller, but separation is useful when ownership or reuse is clear.
Scaling note	Add subfolders only when the feature grows; preserve the boundary and keep cross-feature dependencies explicit.

A.122 src/features/desktop-shell/config/windowConfig.js

Lens	Analysis
------	----------

Lens	Analysis
Purpose	Define desktop shell window defaults.
Responsibility	Provide the focused configuration or artifact described by its purpose.
Dependencies / imports	No JavaScript imports.
Exports	INITIAL_Z_INDEX, DEFAULT_WINDOW_SIZES, WINDOW_CONFIG
Execution flow	The importing module evaluates this file; React or its caller invokes the exported behavior.
Design decision	Code is placed with the feature that owns its change, reinforcing feature-based architecture.
Alternative	The same behavior could be colocated in a caller, but separation is useful when ownership or reuse is clear.
Scaling note	Add subfolders only when the feature grows; preserve the boundary and keep cross-feature dependencies explicit.

A.123 src/features/desktop-shell/hoc/windowWrapper.jsx

Lens	Analysis
Purpose	Wrap desktop app content in managed desktop window behavior.
Responsibility	Render or coordinate the UI behavior implied by the file and its feature boundary.
Dependencies / imports	react, @gsap/react, gsap, gsap/Draggable, clsx, ../config/windowConfig, ../store/windowStore
Exports	windowWrapper
Execution flow	The importing module evaluates this file; React or its caller invokes the exported behavior.
Design decision	Code is placed with the feature that owns its change, reinforcing feature-based architecture.
Alternative	The same behavior could be colocated in a caller, but separation is useful when ownership or reuse is clear.
Scaling note	Add subfolders only when the feature grows; preserve the boundary and keep cross-feature

Lens	Analysis
	dependencies explicit.

A.124 src/features/desktop-shell/store/windowStore.js

Lens	Analysis
Purpose	Own desktop shell window state.
Responsibility	Own and transition shared state for its domain.
Dependencies / imports	zustand, ../config/windowConfig
Exports	useWindowStore
Execution flow	Components call actions; the store creates new state; subscribers re-render.
Design decision	Code is placed with the feature that owns its change, reinforcing feature-based architecture.
Alternative	React context or lifted state could work at smaller scope; the store is justified by distant consumers.
Scaling note	Add subfolders only when the feature grows; preserve the boundary and keep cross-feature dependencies explicit.

A.125 src/features/finder/FinderWindow.jsx

Lens	Analysis
Purpose	Compose the desktop Finder window.
Responsibility	Render or coordinate the UI behavior implied by the file and its feature boundary.
Dependencies / imports	lucide-react, #constants, #store, ../desktop-shell/components/WindowControls, ../desktop-shell/hoc/windowWrapper, ./components/FinderBreadcrumbs, ./components/FinderGrid, ./components/FinderSidebar, ./utils/getFinderOpenAction
Exports	FinderWindow

Lens	Analysis
Execution flow	The importing module evaluates this file; React or its caller invokes the exported behavior.
Design decision	Code is placed with the feature that owns its change, reinforcing feature-based architecture.
Alternative	The same behavior could be colocated in a caller, but separation is useful when ownership or reuse is clear.
Scaling note	Add subfolders only when the feature grows; preserve the boundary and keep cross-feature dependencies explicit.

A.126 `src/features/finder/components/FinderBreadcrumbs.jsx`

Lens	Analysis
Purpose	Render Finder breadcrumb navigation.
Responsibility	Render or coordinate the UI behavior implied by the file and its feature boundary.
Dependencies / imports	react, lucide-react, ../utils/buildBreadcrumbTrail
Exports	FinderBreadcrumbs
Execution flow	The importing module evaluates this file; React or its caller invokes the exported behavior.
Design decision	Code is placed with the feature that owns its change, reinforcing feature-based architecture.
Alternative	The same behavior could be colocated in a caller, but separation is useful when ownership or reuse is clear.
Scaling note	Add subfolders only when the feature grows; preserve the boundary and keep cross-feature dependencies explicit.

A.127 `src/features/finder/components/FinderGrid.jsx`

Lens	Analysis
Purpose	Render Finder file and folder items.

Lens	Analysis
Responsibility	Render or coordinate the UI behavior implied by the file and its feature boundary.
Dependencies / imports	../../utils/getFileIcon
Exports	FinderGrid
Execution flow	The importing module evaluates this file; React or its caller invokes the exported behavior.
Design decision	Code is placed with the feature that owns its change, reinforcing feature-based architecture.
Alternative	The same behavior could be colocated in a caller, but separation is useful when ownership or reuse is clear.
Scaling note	Add subfolders only when the feature grows; preserve the boundary and keep cross-feature dependencies explicit.

A.128 src/features/finder/components/FinderSidebar.jsx

Lens	Analysis
Purpose	Render Finder sidebar sections.
Responsibility	Render or coordinate the UI behavior implied by the file and its feature boundary.
Dependencies / imports	clsx
Exports	FinderSidebar
Execution flow	The importing module evaluates this file; React or its caller invokes the exported behavior.
Design decision	Code is placed with the feature that owns its change, reinforcing feature-based architecture.
Alternative	The same behavior could be colocated in a caller, but separation is useful when ownership or reuse is clear.
Scaling note	Add subfolders only when the feature grows; preserve the boundary and keep cross-feature dependencies explicit.

A.129 src/features/finder/utls/buildBreadcrumbTrail.js

Lens	Analysis
Purpose	Build a Finder breadcrumb trail from the active location.
Responsibility	Perform a focused transformation or decision with minimal side effects.
Dependencies / imports	No JavaScript imports.
Exports	buildBreadcrumbTrail
Execution flow	A caller supplies plain input; the function returns a transformed value or explicit decision.
Design decision	Code is placed with the feature that owns its change, reinforcing feature-based architecture.
Alternative	The same behavior could be colocated in a caller, but separation is useful when ownership or reuse is clear.
Scaling note	Add subfolders only when the feature grows; preserve the boundary and keep cross-feature dependencies explicit.

A.130 src/features/finder/utls/fileTypes.js

Lens	Analysis
Purpose	Define Finder file-type groups.
Responsibility	Perform a focused transformation or decision with minimal side effects.
Dependencies / imports	No JavaScript imports.
Exports	CODE_FILE_TYPES, LINK_FILE_TYPES, isCodeFile, isExternalLinkFile
Execution flow	A caller supplies plain input; the function returns a transformed value or explicit decision.
Design decision	Code is placed with the feature that owns its change, reinforcing feature-based architecture.
Alternative	The same behavior could be colocated in a caller, but separation is useful when ownership or reuse is clear.

Lens	Analysis
Scaling note	Add subfolders only when the feature grows; preserve the boundary and keep cross-feature dependencies explicit.

A.131 src/features/finder/utls/getFinderOpenAction.js

Lens	Analysis
Purpose	Decide what Finder should do when a user opens an item.
Responsibility	Perform a focused transformation or decision with minimal side effects.
Dependencies / imports	./fileTypes
Exports	FINDER_OPEN_ACTIONS, getFinderOpenAction
Execution flow	A caller supplies plain input; the function returns a transformed value or explicit decision.
Design decision	Code is placed with the feature that owns its change, reinforcing feature-based architecture.
Alternative	The same behavior could be colocated in a caller, but separation is useful when ownership or reuse is clear.
Scaling note	Add subfolders only when the feature grows; preserve the boundary and keep cross-feature dependencies explicit.

A.132 src/features/mobile-shell/MobileApp.jsx

Lens	Analysis
Purpose	Implement or expose the MobileApp module in its owning folder.
Responsibility	Render or coordinate the UI behavior implied by the file and its feature boundary.
Dependencies / imports	react, framer-motion, ./data/apps, ./shell, ./apps
Exports	MobileApp

Lens	Analysis
Execution flow	The importing module evaluates this file; React or its caller invokes the exported behavior.
Design decision	Code is placed with the feature that owns its change, reinforcing feature-based architecture.
Alternative	The same behavior could be colocated in a caller, but separation is useful when ownership or reuse is clear.
Scaling note	Add subfolders only when the feature grows; preserve the boundary and keep cross-feature dependencies explicit.

A.133 src/features/mobile-shell/apps/About.jsx

Lens	Analysis
Purpose	Implement or expose the About module in its owning folder.
Responsibility	Render or coordinate the UI behavior implied by the file and its feature boundary.
Dependencies / imports	#constants
Exports	AboutApp
Execution flow	The importing module evaluates this file; React or its caller invokes the exported behavior.
Design decision	Code is placed with the feature that owns its change, reinforcing feature-based architecture.
Alternative	The same behavior could be colocated in a caller, but separation is useful when ownership or reuse is clear.
Scaling note	Add subfolders only when the feature grows; preserve the boundary and keep cross-feature dependencies explicit.

A.134 src/features/mobile-shell/apps/Articles.jsx

Lens	Analysis
Purpose	Implement or expose the Articles module in its owning folder.

Lens	Analysis
Responsibility	Render or coordinate the UI behavior implied by the file and its feature boundary.
Dependencies / imports	lucide-react, #constants
Exports	ArticlesApp
Execution flow	The importing module evaluates this file; React or its caller invokes the exported behavior.
Design decision	Code is placed with the feature that owns its change, reinforcing feature-based architecture.
Alternative	The same behavior could be colocated in a caller, but separation is useful when ownership or reuse is clear.
Scaling note	Add subfolders only when the feature grows; preserve the boundary and keep cross-feature dependencies explicit.

A.135 src/features/mobile-shell/apps/Code.jsx

Lens	Analysis
Purpose	Implement or expose the Code module in its owning folder.
Responsibility	Render or coordinate the UI behavior implied by the file and its feature boundary.
Dependencies / imports	react, lucide-react, ../../api/github
Exports	CodeApp
Execution flow	The importing module evaluates this file; React or its caller invokes the exported behavior.
Design decision	Code is placed with the feature that owns its change, reinforcing feature-based architecture.
Alternative	The same behavior could be colocated in a caller, but separation is useful when ownership or reuse is clear.
Scaling note	Add subfolders only when the feature grows; preserve the boundary and keep cross-feature dependencies explicit.

A.136 src/features/mobile-shell/apps/Contact.jsx

Lens	Analysis
Purpose	Implement or expose the Contact module in its owning folder.
Responsibility	Render or coordinate the UI behavior implied by the file and its feature boundary.
Dependencies / imports	#constants
Exports	ContactApp
Execution flow	The importing module evaluates this file; React or its caller invokes the exported behavior.
Design decision	Code is placed with the feature that owns its change, reinforcing feature-based architecture.
Alternative	The same behavior could be colocated in a caller, but separation is useful when ownership or reuse is clear.
Scaling note	Add subfolders only when the feature grows; preserve the boundary and keep cross-feature dependencies explicit.

A.137 src/features/mobile-shell/apps/Gallery.jsx

Lens	Analysis
Purpose	Implement or expose the Gallery module in its owning folder.
Responsibility	Render or coordinate the UI behavior implied by the file and its feature boundary.
Dependencies / imports	react, lucide-react, #constants
Exports	GalleryApp
Execution flow	The importing module evaluates this file; React or its caller invokes the exported behavior.
Design decision	Code is placed with the feature that owns its change, reinforcing feature-based architecture.
Alternative	The same behavior could be colocated in a caller, but separation is useful when ownership or reuse is clear.

Lens	Analysis
Scaling note	Add subfolders only when the feature grows; preserve the boundary and keep cross-feature dependencies explicit.

A.138 src/features/mobile-shell/apps/Projects.jsx

Lens	Analysis
Purpose	Implement or expose the Projects module in its owning folder.
Responsibility	Render or coordinate the UI behavior implied by the file and its feature boundary.
Dependencies / imports	react, lucide-react, ../../portfolio/hooks/usePortfolioFileSystem, #constants
Exports	ProjectsApp
Execution flow	The importing module evaluates this file; React or its caller invokes the exported behavior.
Design decision	Code is placed with the feature that owns its change, reinforcing feature-based architecture.
Alternative	The same behavior could be colocated in a caller, but separation is useful when ownership or reuse is clear.
Scaling note	Add subfolders only when the feature grows; preserve the boundary and keep cross-feature dependencies explicit.

A.139 src/features/mobile-shell/apps/Resume.jsx

Lens	Analysis
Purpose	Implement or expose the Resume module in its owning folder.
Responsibility	Render or coordinate the UI behavior implied by the file and its feature boundary.
Dependencies / imports	react, react-pdf, lucide-react
Exports	ResumeApp

Lens	Analysis
Execution flow	The importing module evaluates this file; React or its caller invokes the exported behavior.
Design decision	Code is placed with the feature that owns its change, reinforcing feature-based architecture.
Alternative	The same behavior could be colocated in a caller, but separation is useful when ownership or reuse is clear.
Scaling note	Add subfolders only when the feature grows; preserve the boundary and keep cross-feature dependencies explicit.

A.140 `src/features/mobile-shell/apps/Skills.jsx`

Lens	Analysis
Purpose	Implement or expose the Skills module in its owning folder.
Responsibility	Render or coordinate the UI behavior implied by the file and its feature boundary.
Dependencies / imports	lucide-react, #constants
Exports	SkillsApp
Execution flow	The importing module evaluates this file; React or its caller invokes the exported behavior.
Design decision	Code is placed with the feature that owns its change, reinforcing feature-based architecture.
Alternative	The same behavior could be colocated in a caller, but separation is useful when ownership or reuse is clear.
Scaling note	Add subfolders only when the feature grows; preserve the boundary and keep cross-feature dependencies explicit.

A.141 `src/features/mobile-shell/apps/ToDo.jsx`

Lens	Analysis
Purpose	Implement or expose the ToDo module in its owning folder.

Lens	Analysis
Responsibility	Render or coordinate the UI behavior implied by the file and its feature boundary.
Dependencies / imports	react, lucide-react, ../data/todos
Exports	TodoApp
Execution flow	The importing module evaluates this file; React or its caller invokes the exported behavior.
Design decision	Code is placed with the feature that owns its change, reinforcing feature-based architecture.
Alternative	The same behavior could be colocated in a caller, but separation is useful when ownership or reuse is clear.
Scaling note	Add subfolders only when the feature grows; preserve the boundary and keep cross-feature dependencies explicit.

A.142 src/features/mobile-shell/apps/Weather.jsx

Lens	Analysis
Purpose	Implement or expose the Weather module in its owning folder.
Responsibility	Render or coordinate the UI behavior implied by the file and its feature boundary.
Dependencies / imports	dayjs, lucide-react, ../components/WeatherIcon, ../data/weather
Exports	WeatherApp
Execution flow	The importing module evaluates this file; React or its caller invokes the exported behavior.
Design decision	Code is placed with the feature that owns its change, reinforcing feature-based architecture.
Alternative	The same behavior could be colocated in a caller, but separation is useful when ownership or reuse is clear.
Scaling note	Add subfolders only when the feature grows; preserve the boundary and keep cross-feature dependencies explicit.

A.143 src/features/mobile-shell/apps/index.js

Lens	Analysis
Purpose	Implement or expose the index module in its owning folder.
Responsibility	Provide the focused configuration or artifact described by its purpose.
Dependencies / imports	./About, ./Articles, ./Code, ./Contact, ./Gallery, ./Projects, ./Resume, ./Skills, ./Todo, ./Weather
Exports	None
Execution flow	The importing module evaluates this file; React or its caller invokes the exported behavior.
Design decision	Code is placed with the feature that owns its change, reinforcing feature-based architecture.
Alternative	The same behavior could be colocated in a caller, but separation is useful when ownership or reuse is clear.
Scaling note	Add subfolders only when the feature grows; preserve the boundary and keep cross-feature dependencies explicit.

A.144 src/features/mobile-shell/components/WeatherIcon.jsx

Lens	Analysis
Purpose	Implement or expose the WeatherIcon module in its owning folder.
Responsibility	Render or coordinate the UI behavior implied by the file and its feature boundary.
Dependencies / imports	lucide-react
Exports	WeatherIcon
Execution flow	The importing module evaluates this file; React or its caller invokes the exported behavior.
Design decision	Code is placed with the feature that owns its change, reinforcing feature-based architecture.
Alternative	The same behavior could be colocated in a caller, but separation is useful when ownership or reuse is clear.

Lens	Analysis
Scaling note	Add subfolders only when the feature grows; preserve the boundary and keep cross-feature dependencies explicit.

A.145 src/features/mobile-shell/data/apps.js

Lens	Analysis
Purpose	Implement or expose the apps module in its owning folder.
Responsibility	Provide stable data/configuration without owning unrelated UI behavior.
Dependencies / imports	No JavaScript imports.
Exports	mobileApps, homeApps, dockApps, getMobileApp
Execution flow	The importing module evaluates this file; React or its caller invokes the exported behavior.
Design decision	Code is placed with the feature that owns its change, reinforcing feature-based architecture.
Alternative	The same behavior could be colocated in a caller, but separation is useful when ownership or reuse is clear.
Scaling note	Add subfolders only when the feature grows; preserve the boundary and keep cross-feature dependencies explicit.

A.146 src/features/mobile-shell/data/todos.js

Lens	Analysis
Purpose	Implement or expose the todos module in its owning folder.
Responsibility	Provide stable data/configuration without owning unrelated UI behavior.
Dependencies / imports	react
Exports	useTodos

Lens	Analysis
Execution flow	The importing module evaluates this file; React or its caller invokes the exported behavior.
Design decision	Code is placed with the feature that owns its change, reinforcing feature-based architecture.
Alternative	The same behavior could be colocated in a caller, but separation is useful when ownership or reuse is clear.
Scaling note	Add subfolders only when the feature grows; preserve the boundary and keep cross-feature dependencies explicit.

A.147 `src/features/mobile-shell/data/weather.js`

Lens	Analysis
Purpose	Implement or expose the weather module in its owning folder.
Responsibility	Provide stable data/configuration without owning unrelated UI behavior.
Dependencies / imports	react
Exports	useWeather
Execution flow	The importing module evaluates this file; React or its caller invokes the exported behavior.
Design decision	Code is placed with the feature that owns its change, reinforcing feature-based architecture.
Alternative	The same behavior could be colocated in a caller, but separation is useful when ownership or reuse is clear.
Scaling note	Add subfolders only when the feature grows; preserve the boundary and keep cross-feature dependencies explicit.

A.148 `src/features/mobile-shell/shell/AppFrame.jsx`

Lens	Analysis
Purpose	Implement or expose the AppFrame module in its owning folder.

Lens	Analysis
Responsibility	Render or coordinate the UI behavior implied by the file and its feature boundary.
Dependencies / imports	lucide-react, framer-motion, ./StatusBar
Exports	AppFrame
Execution flow	The importing module evaluates this file; React or its caller invokes the exported behavior.
Design decision	Code is placed with the feature that owns its change, reinforcing feature-based architecture.
Alternative	The same behavior could be colocated in a caller, but separation is useful when ownership or reuse is clear.
Scaling note	Add subfolders only when the feature grows; preserve the boundary and keep cross-feature dependencies explicit.

A.149 src/features/mobile-shell/shell/AppIcon.jsx

Lens	Analysis
Purpose	Implement or expose the AppIcon module in its owning folder.
Responsibility	Render or coordinate the UI behavior implied by the file and its feature boundary.
Dependencies / imports	framer-motion
Exports	AppIcon
Execution flow	The importing module evaluates this file; React or its caller invokes the exported behavior.
Design decision	Code is placed with the feature that owns its change, reinforcing feature-based architecture.
Alternative	The same behavior could be colocated in a caller, but separation is useful when ownership or reuse is clear.
Scaling note	Add subfolders only when the feature grows; preserve the boundary and keep cross-feature dependencies explicit.

A.150 src/features/mobile-shell/shell/HomeScreen.jsx

Lens	Analysis
Purpose	Implement or expose the HomeScreen module in its owning folder.
Responsibility	Render or coordinate the UI behavior implied by the file and its feature boundary.
Dependencies / imports	dayjs, react, lucide-react, ../components/WeatherIcon, ../data/apps, ../data/todos, ../data/weather, ./AppIcon, ./StatusBar
Exports	HomeScreen
Execution flow	The importing module evaluates this file; React or its caller invokes the exported behavior.
Design decision	Code is placed with the feature that owns its change, reinforcing feature-based architecture.
Alternative	The same behavior could be colocated in a caller, but separation is useful when ownership or reuse is clear.
Scaling note	Add subfolders only when the feature grows; preserve the boundary and keep cross-feature dependencies explicit.

A.151 src/features/mobile-shell/shell/StatusBar.jsx

Lens	Analysis
Purpose	Implement or expose the StatusBar module in its owning folder.
Responsibility	Render or coordinate the UI behavior implied by the file and its feature boundary.
Dependencies / imports	dayjs, react, lucide-react
Exports	StatusBar
Execution flow	The importing module evaluates this file; React or its caller invokes the exported behavior.
Design decision	Code is placed with the feature that owns its change, reinforcing feature-based architecture.
Alternative	The same behavior could be colocated in a caller, but separation is useful when ownership or reuse is clear.

Lens	Analysis
Scaling note	Add subfolders only when the feature grows; preserve the boundary and keep cross-feature dependencies explicit.

A.152 src/features/mobile-shell/shell/index.js

Lens	Analysis
Purpose	Implement or expose the index module in its owning folder.
Responsibility	Provide the focused configuration or artifact described by its purpose.
Dependencies / imports	./AppFrame, ./AppIcon, ./HomeScreen, ./StatusBar
Exports	None
Execution flow	The importing module evaluates this file; React or its caller invokes the exported behavior.
Design decision	Code is placed with the feature that owns its change, reinforcing feature-based architecture.
Alternative	The same behavior could be colocated in a caller, but separation is useful when ownership or reuse is clear.
Scaling note	Add subfolders only when the feature grows; preserve the boundary and keep cross-feature dependencies explicit.

A.153 src/features/mobile-shell/styles.css

Lens	Analysis
Purpose	Define the visual rules for the scope indicated by its path.
Responsibility	Provide presentation only; application decisions remain in JavaScript modules.
Dependencies / imports	Imported by its owning React entry; references public assets and class names.
Exports	None

Lens	Analysis
Execution flow	The bundler loads the stylesheet; the browser matches selectors during style calculation.
Design decision	Code is placed with the feature that owns its change, reinforcing feature-based architecture.
Alternative	CSS Modules or CSS-in-JS could isolate selectors, but migration should be gradual and justified by collisions.
Scaling note	Add subfolders only when the feature grows; preserve the boundary and keep cross-feature dependencies explicit.

A.154 `src/features/portfolio/hooks/usePortfolioFileSystem.js`

Lens	Analysis
Purpose	Load and expose the portfolio file-system data.
Responsibility	Provide the focused configuration or artifact described by its purpose.
Dependencies / imports	react, #store, ../utils/buildWorkLocation
Exports	usePortfolioFileSystem
Execution flow	The importing module evaluates this file; React or its caller invokes the exported behavior.
Design decision	Code is placed with the feature that owns its change, reinforcing feature-based architecture.
Alternative	The same behavior could be colocated in a caller, but separation is useful when ownership or reuse is clear.
Scaling note	Add subfolders only when the feature grows; preserve the boundary and keep cross-feature dependencies explicit.

A.155 `src/features/portfolio/utils/buildWorkLocation.js`

Lens	Analysis
Purpose	Build the portfolio Work folder from GitHub repository data.

Lens	Analysis
Responsibility	Perform a focused transformation or decision with minimal side effects.
Dependencies / imports	../../api/github
Exports	buildWorkLocation
Execution flow	A caller supplies plain input; the function returns a transformed value or explicit decision.
Design decision	Code is placed with the feature that owns its change, reinforcing feature-based architecture.
Alternative	The same behavior could be colocated in a caller, but separation is useful when ownership or reuse is clear.
Scaling note	Add subfolders only when the feature grows; preserve the boundary and keep cross-feature dependencies explicit.

A.156 src/hoc/windowWrapper.jsx

Lens	Analysis
Purpose	Preserve the existing windowWrapper import path.
Responsibility	Render or coordinate the UI behavior implied by the file and its feature boundary.
Dependencies / imports	../features/desktop-shell/hoc/windowWrapper
Exports	the
Execution flow	The importing module evaluates this file; React or its caller invokes the exported behavior.
Design decision	The file has one primary responsibility and follows the repository's existing convention.
Alternative	The same behavior could be colocated in a caller, but separation is useful when ownership or reuse is clear.
Scaling note	Keep the responsibility narrow and revisit the abstraction only after repeated real change pressure.

A.157 src/hooks/useViewportMode.js

Lens	Analysis
Purpose	Implement or expose the useViewportMode module in its owning folder.
Responsibility	Provide the focused configuration or artifact described by its purpose.
Dependencies / imports	react
Exports	useViewportMode
Execution flow	The importing module evaluates this file; React or its caller invokes the exported behavior.
Design decision	The file has one primary responsibility and follows the repository's existing convention.
Alternative	The same behavior could be colocated in a caller, but separation is useful when ownership or reuse is clear.
Scaling note	Keep the responsibility narrow and revisit the abstraction only after repeated real change pressure.

A.158 src/index.css

Lens	Analysis
Purpose	Define the visual rules for the scope indicated by its path.
Responsibility	Provide presentation only; application decisions remain in JavaScript modules.
Dependencies / imports	Imported by its owning React entry; references public assets and class names.
Exports	None
Execution flow	The bundler loads the stylesheet; the browser matches selectors during style calculation.
Design decision	The file has one primary responsibility and follows the repository's existing convention.
Alternative	CSS Modules or CSS-in-JS could isolate selectors, but migration should be gradual and justified by collisions.

Lens	Analysis
Scaling note	Split by feature when ownership or selector collision becomes costly; centralize stable tokens before duplicating values.

A.159 src/main.jsx

Lens	Analysis
Purpose	Implement or expose the main module in its owning folder.
Responsibility	Render or coordinate the UI behavior implied by the file and its feature boundary.
Dependencies / imports	react, react-dom/client, ./app/App.jsx
Exports	None
Execution flow	Browser loads the module, creates the React root, and renders App.
Design decision	The file has one primary responsibility and follows the repository's existing convention.
Alternative	The same behavior could be colocated in a caller, but separation is useful when ownership or reuse is clear.
Scaling note	Keep the responsibility narrow and revisit the abstraction only after repeated real change pressure.

A.160 src/mobile/MobileApp.jsx

Lens	Analysis
Purpose	Preserve the existing mobile app import path.
Responsibility	Render or coordinate the UI behavior implied by the file and its feature boundary.
Dependencies / imports	../features/mobile-shell/MobileApp
Exports	the

Lens	Analysis
Execution flow	The importing module evaluates this file; React or its caller invokes the exported behavior.
Design decision	The file has one primary responsibility and follows the repository's existing convention.
Alternative	The same behavior could be colocated in a caller, but separation is useful when ownership or reuse is clear.
Scaling note	Keep the responsibility narrow and revisit the abstraction only after repeated real change pressure.

A.161 src/store/index.js

Lens	Analysis
Purpose	Implement or expose the index module in its owning folder.
Responsibility	Own and transition shared state for its domain.
Dependencies / imports	./window, ./location, ./useDataStore
Exports	None
Execution flow	Components call actions; the store creates new state; subscribers re-render.
Design decision	The path supports app-level UI or a gradual compatibility migration; avoid adding unrelated behavior.
Alternative	React context or lifted state could work at smaller scope; the store is justified by distant consumers.
Scaling note	Retire compatibility paths after callers migrate; do not let the bridge become a second permanent architecture.

A.162 src/store/location.js

Lens	Analysis
Purpose	Implement or expose the location module in its owning folder.

Lens	Analysis
Responsibility	Own and transition shared state for its domain.
Dependencies / imports	zustand, zustand/middleware/immer
Exports	useLocationStore
Execution flow	Components call actions; the store creates new state; subscribers re-render.
Design decision	The path supports app-level UI or a gradual compatibility migration; avoid adding unrelated behavior.
Alternative	React context or lifted state could work at smaller scope; the store is justified by distant consumers.
Scaling note	Retire compatibility paths after callers migrate; do not let the bridge become a second permanent architecture.

A.163 src/store/useDataStore.js

Lens	Analysis
Purpose	Store portfolio domain data that multiple features need.
Responsibility	Own and transition shared state for its domain.
Dependencies / imports	zustand
Exports	useDataStore
Execution flow	Components call actions; the store creates new state; subscribers re-render.
Design decision	The path supports app-level UI or a gradual compatibility migration; avoid adding unrelated behavior.
Alternative	React context or lifted state could work at smaller scope; the store is justified by distant consumers.
Scaling note	Retire compatibility paths after callers migrate; do not let the bridge become a second permanent architecture.

A.164 src/store/window.js

Lens	Analysis
Purpose	Preserve the existing desktop window store import path.
Responsibility	Own and transition shared state for its domain.
Dependencies / imports	../features/desktop-shell/store/windowStore
Exports	the
Execution flow	Components call actions; the store creates new state; subscribers re-render.
Design decision	The path supports app-level UI or a gradual compatibility migration; avoid adding unrelated behavior.
Alternative	React context or lifted state could work at smaller scope; the store is justified by distant consumers.
Scaling note	Retire compatibility paths after callers migrate; do not let the bridge become a second permanent architecture.

A.165 src/utils/buildWorkLocation.js

Lens	Analysis
Purpose	Preserve the existing buildWorkLocation import path.
Responsibility	Perform a focused transformation or decision with minimal side effects.
Dependencies / imports	../features/portfolio/utils/buildWorkLocation
Exports	the
Execution flow	A caller supplies plain input; the function returns a transformed value or explicit decision.
Design decision	The file has one primary responsibility and follows the repository's existing convention.
Alternative	The same behavior could be colocated in a caller, but separation is useful when ownership or reuse is clear.

Lens	Analysis
Scaling note	Keep the responsibility narrow and revisit the abstraction only after repeated real change pressure.

A.166 src/utils/getFileIcon.jsx

Lens	Analysis
Purpose	Implement or expose the getFileIcon module in its owning folder.
Responsibility	Render or coordinate the UI behavior implied by the file and its feature boundary.
Dependencies / imports	react-icons/vsc, react-icons/fa
Exports	getFileIcon
Execution flow	A caller supplies plain input; the function returns a transformed value or explicit decision.
Design decision	The file has one primary responsibility and follows the repository's existing convention.
Alternative	The same behavior could be colocated in a caller, but separation is useful when ownership or reuse is clear.
Scaling note	Keep the responsibility narrow and revisit the abstraction only after repeated real change pressure.

A.167 src/utils/index.js

Lens	Analysis
Purpose	Implement or expose the index module in its owning folder.
Responsibility	Perform a focused transformation or decision with minimal side effects.
Dependencies / imports	./getFileIcon
Exports	None
Execution flow	A caller supplies plain input; the function returns a transformed value or explicit decision.

Lens	Analysis
Design decision	The file has one primary responsibility and follows the repository's existing convention.
Alternative	The same behavior could be colocated in a caller, but separation is useful when ownership or reuse is clear.
Scaling note	Keep the responsibility narrow and revisit the abstraction only after repeated real change pressure.

A.168 src/windows/Contact.jsx

Lens	Analysis
Purpose	Implement or expose the Contact module in its owning folder.
Responsibility	Render or coordinate the UI behavior implied by the file and its feature boundary.
Dependencies / imports	#constants, ../features/desktop-shell/components/WindowControls, ../features/desktop-shell/hoc/windowWrapper, react
Exports	ContactWindow
Execution flow	The importing module evaluates this file; React or its caller invokes the exported behavior.
Design decision	The path supports app-level UI or a gradual compatibility migration; avoid adding unrelated behavior.
Alternative	The same behavior could be colocated in a caller, but separation is useful when ownership or reuse is clear.
Scaling note	Retire compatibility paths after callers migrate; do not let the bridge become a second permanent architecture.

A.169 src/windows/Finder.jsx

Lens	Analysis
Purpose	Preserve the existing desktop window import path for Finder.
Responsibility	Render or coordinate the UI behavior implied by the file and its feature boundary.

Lens	Analysis
Dependencies / imports	../features/finder/FinderWindow
Exports	the
Execution flow	The importing module evaluates this file; React or its caller invokes the exported behavior.
Design decision	The path supports app-level UI or a gradual compatibility migration; avoid adding unrelated behavior.
Alternative	The same behavior could be colocated in a caller, but separation is useful when ownership or reuse is clear.
Scaling note	Retire compatibility paths after callers migrate; do not let the bridge become a second permanent architecture.

A.170 src/windows/Gallery.jsx

Lens	Analysis
Purpose	Implement or expose the Gallery module in its owning folder.
Responsibility	Render or coordinate the UI behavior implied by the file and its feature boundary.
Dependencies / imports	react, ../features/desktop-shell/hoc/windowWrapper, ../features/desktop-shell/components/WindowControls, #components/Index, #constants, framer-motion, lucide-react
Exports	windowWrapper
Execution flow	The importing module evaluates this file; React or its caller invokes the exported behavior.
Design decision	The path supports app-level UI or a gradual compatibility migration; avoid adding unrelated behavior.
Alternative	The same behavior could be colocated in a caller, but separation is useful when ownership or reuse is clear.
Scaling note	Retire compatibility paths after callers migrate; do not let the bridge become a second permanent architecture.

A.171 src/windows/ImageApp.jsx

Lens	Analysis
Purpose	Implement or expose the ImageApp module in its owning folder.
Responsibility	Render or coordinate the UI behavior implied by the file and its feature boundary.
Dependencies / imports	react, ../features/desktop-shell/hoc/windowWrapper, ../features/desktop-shell/components/WindowControls, #store
Exports	ImageWindow
Execution flow	The importing module evaluates this file; React or its caller invokes the exported behavior.
Design decision	The path supports app-level UI or a gradual compatibility migration; avoid adding unrelated behavior.
Alternative	The same behavior could be colocated in a caller, but separation is useful when ownership or reuse is clear.
Scaling note	Retire compatibility paths after callers migrate; do not let the bridge become a second permanent architecture.

A.172 src/windows/Resume.jsx

Lens	Analysis
Purpose	Implement or expose the Resume module in its owning folder.
Responsibility	Render or coordinate the UI behavior implied by the file and its feature boundary.
Dependencies / imports	react, ../features/desktop-shell/components/WindowControls, ../features/desktop-shell/hoc/windowWrapper, react-pdf, lucide-react
Exports	ResumeWindow
Execution flow	The importing module evaluates this file; React or its caller invokes the exported behavior.
Design decision	The path supports app-level UI or a gradual compatibility migration; avoid adding unrelated behavior.

Lens	Analysis
Alternative	The same behavior could be colocated in a caller, but separation is useful when ownership or reuse is clear.
Scaling note	Retire compatibility paths after callers migrate; do not let the bridge become a second permanent architecture.

A.173 src/windows/Safari.jsx

Lens	Analysis
Purpose	Implement or expose the Safari module in its owning folder.
Responsibility	Render or coordinate the UI behavior implied by the file and its feature boundary.
Dependencies / imports	react, ../features/desktop-shell/components/WindowControls, ../features/desktop-shell/hoc/windowWrapper, lucide-react, #constants
Exports	windowWrapper
Execution flow	The importing module evaluates this file; React or its caller invokes the exported behavior.
Design decision	The path supports app-level UI or a gradual compatibility migration; avoid adding unrelated behavior.
Alternative	The same behavior could be colocated in a caller, but separation is useful when ownership or reuse is clear.
Scaling note	Retire compatibility paths after callers migrate; do not let the bridge become a second permanent architecture.

A.174 src/windows/Terminal.jsx

Lens	Analysis
Purpose	Implement or expose the Terminal module in its owning folder.
Responsibility	Render or coordinate the UI behavior implied by the file and its feature boundary.
Dependencies /	#constants, ../features/desktop-shell/components/WindowControls, ../features/desktop-

Lens	Analysis
imports	shell/hoc/windowWrapper, lucide-react, react
Exports	TerminalWindow
Execution flow	The importing module evaluates this file; React or its caller invokes the exported behavior.
Design decision	The path supports app-level UI or a gradual compatibility migration; avoid adding unrelated behavior.
Alternative	The same behavior could be colocated in a caller, but separation is useful when ownership or reuse is clear.
Scaling note	Retire compatibility paths after callers migrate; do not let the bridge become a second permanent architecture.

A.175 src/windows/TextApp.jsx

Lens	Analysis
Purpose	Implement or expose the TextApp module in its owning folder.
Responsibility	Render or coordinate the UI behavior implied by the file and its feature boundary.
Dependencies / imports	react, ../features/desktop-shell/hoc/windowWrapper, ../features/desktop-shell/components/WindowControls, #store
Exports	TextWindow
Execution flow	The importing module evaluates this file; React or its caller invokes the exported behavior.
Design decision	The path supports app-level UI or a gradual compatibility migration; avoid adding unrelated behavior.
Alternative	The same behavior could be colocated in a caller, but separation is useful when ownership or reuse is clear.
Scaling note	Retire compatibility paths after callers migrate; do not let the bridge become a second permanent architecture.

A.176 src/windows/VsCode.jsx

Lens	Analysis
Purpose	Preserve the existing VS Code window import path.
Responsibility	Render or coordinate the UI behavior implied by the file and its feature boundary.
Dependencies / imports	../features/code-preview/windows/CodePreviewWindow
Exports	the
Execution flow	The importing module evaluates this file; React or its caller invokes the exported behavior.
Design decision	The path supports app-level UI or a gradual compatibility migration; avoid adding unrelated behavior.
Alternative	The same behavior could be colocated in a caller, but separation is useful when ownership or reuse is clear.
Scaling note	Retire compatibility paths after callers migrate; do not let the bridge become a second permanent architecture.

A.177 src/windows/index.js

Lens	Analysis
Purpose	Implement or expose the index module in its owning folder.
Responsibility	Provide the focused configuration or artifact described by its purpose.
Dependencies / imports	./Terminal, ./Safari, ./Resume, ./Finder, ./TextApp.jsx, ./ImageApp, ./Contact, ./Gallery, ./VsCode
Exports	None
Execution flow	The importing module evaluates this file; React or its caller invokes the exported behavior.
Design decision	The path supports app-level UI or a gradual compatibility migration; avoid adding unrelated behavior.

Lens	Analysis
Alternative	The same behavior could be colocated in a caller, but separation is useful when ownership or reuse is clear.
Scaling note	Retire compatibility paths after callers migrate; do not let the bridge become a second permanent architecture.

A.178 vite-dev.err.log

Lens	Analysis
Purpose	Support the project through the vite-dev.err.log artifact.
Responsibility	Provide the focused configuration or artifact described by its purpose.
Dependencies / imports	No JavaScript imports.
Exports	None
Execution flow	Consumed during install, build, development, or browser rendering.
Design decision	The file has one primary responsibility and follows the repository's existing convention.
Alternative	The same behavior could be colocated in a caller, but separation is useful when ownership or reuse is clear.
Scaling note	Keep the responsibility narrow and revisit the abstraction only after repeated real change pressure.

A.179 vite-dev.out.log

Lens	Analysis
Purpose	Support the project through the vite-dev.out.log artifact.
Responsibility	Provide the focused configuration or artifact described by its purpose.
Dependencies / imports	No JavaScript imports.

Lens	Analysis
Exports	None
Execution flow	Consumed during install, build, development, or browser rendering.
Design decision	The file has one primary responsibility and follows the repository's existing convention.
Alternative	The same behavior could be colocated in a caller, but separation is useful when ownership or reuse is clear.
Scaling note	Keep the responsibility narrow and revisit the abstraction only after repeated real change pressure.

A.180 vite.config.js

Lens	Analysis
Purpose	Implement or expose the vite.config module in its owning folder.
Responsibility	Provide the focused configuration or artifact described by its purpose.
Dependencies / imports	vite, @vitejs/plugin-react, @tailwindcss/vite, path, url
Exports	defineConfig
Execution flow	The importing module evaluates this file; React or its caller invokes the exported behavior.
Design decision	The file has one primary responsibility and follows the repository's existing convention.
Alternative	The same behavior could be colocated in a caller, but separation is useful when ownership or reuse is clear.
Scaling note	Keep the responsibility narrow and revisit the abstraction only after repeated real change pressure.
